

### Aquarius - One Way Speech Pager with Data Messaging

Most commonly used for Emergency teams such as cardiac, trauma, major incident etc. Speech paging calls are initiated from ANY of the operator's consoles to any individual or group of pagers. There is no limit to the number of groups on a paging system and no limit to the number of users in any one group. Any pager can be in up to 10 groups which would include all the emergency Paediatrics, Surgical groups and Trauma etc.

The Aquarius pager will also receive data messages up to 40 characters. These would normally be simple messages sent from the telephone e.g. «EXT12345»

If third party integration is used, messages from the fire alarm or nurse call system call also be displayed.

## Benefits - Why upgrade your system to STANLEY Smart Pager?

- Use the paging system in the same way
- Send group voice messages
- Messages sent from the telephone system.
- Introducing call confirmation responses back to switchboard
- Through using the **CONFIRM** button on your smartphone
- Full visibility that message alerts have been received and responded to
- No need for re-paging
- Pager Smartphone functionality
- Individual logins for assignment to clinical groups
- Personal address book
- Pager messaging App
- Contact colleagues by **TEXT** or **CHAT**
- Enhanced call logging facilities
- Such as 'message received' and 'message read' notifications
- Introduce gradual migration of speech & non-speech pagers to 2-way VoIP smart device
- Utilising the hospital's Wi-Fi and global mobile data networks
- Smartphone intelligence to back up or replace legacy paging systems
- Additional user functionality available
- Task allocation messaging
- Free up valuable clinical staff time to focus on patient care rather than responding to paging alerts

## Enhancing communications in healthcare
