STANLEY Security

Remote Security Management

A smarter and faster way to secure your business remotely

As more organisations send staff home and temporarily close their doors to visitors and contractors, they may need to leverage remote services and support for some business functions, including security. Our remote security management service can be easily implemented with an existing camera solution.

Safeguard your businesses from anywhere

STANLEY Security want to empower the protectors of those businesses, to enable them to continue safeguarding their premises remotely with absolute confidence that at least their assets are safe.

Our Remote Security Management service allows our monitoring professionals to confirm an intrusion attempt is taking place, reducing the occurrence of false alarms which leads to faster Police response.

Remote security management packages

Package 1: Remote video verification
A very cost-effective form of viewing incidents/activations through video, linked to when an intruder alarm is activated. This could also be for bringing up live video footage for video review of an area following an alarm in another location on site by our monitoring professionals.

Package 2: Remote camera activation
Utilising onboard or edge analytics, Camera Activated CCTV Monitoring allows large areas to be protected, via our Remote Monitoring Station. When an alarm is triggered, a video clip of the alarm is dispatched to the STANLEY Security Monitoring Station for review by an operator.

Value added services

Audio talk-down
Warnings issued either automatically or manually – can be a highly effective enhancement to video surveillance.

Remote guard tours
Our operators can perform scheduled tours of your business and can "talk down" to the site in the event that unauthorised persons are on the premises.

Video safeguard
Utilising Video Monitoring, we can offer protection to colleagues who are working either alone or in high risk/ high security locations.

Remote interactive response
Leveraging equipment such as Intercoms, CCTV and Access Control, we can remotely conduct security guard tasks such as visitor validation, vehicle access and area lockdowns.
