

DATASHEET

Pacom .is Site Manager

Overview

Forming part of the new generation *Pacom .is* (Suite) of security applications, Site Manager provides unparalleled capabilities in Security Network configuration. Whether you need to configure a single controller or thousands of controllers, Site Manager places the industry's most powerful tool conveniently at your fingertips.

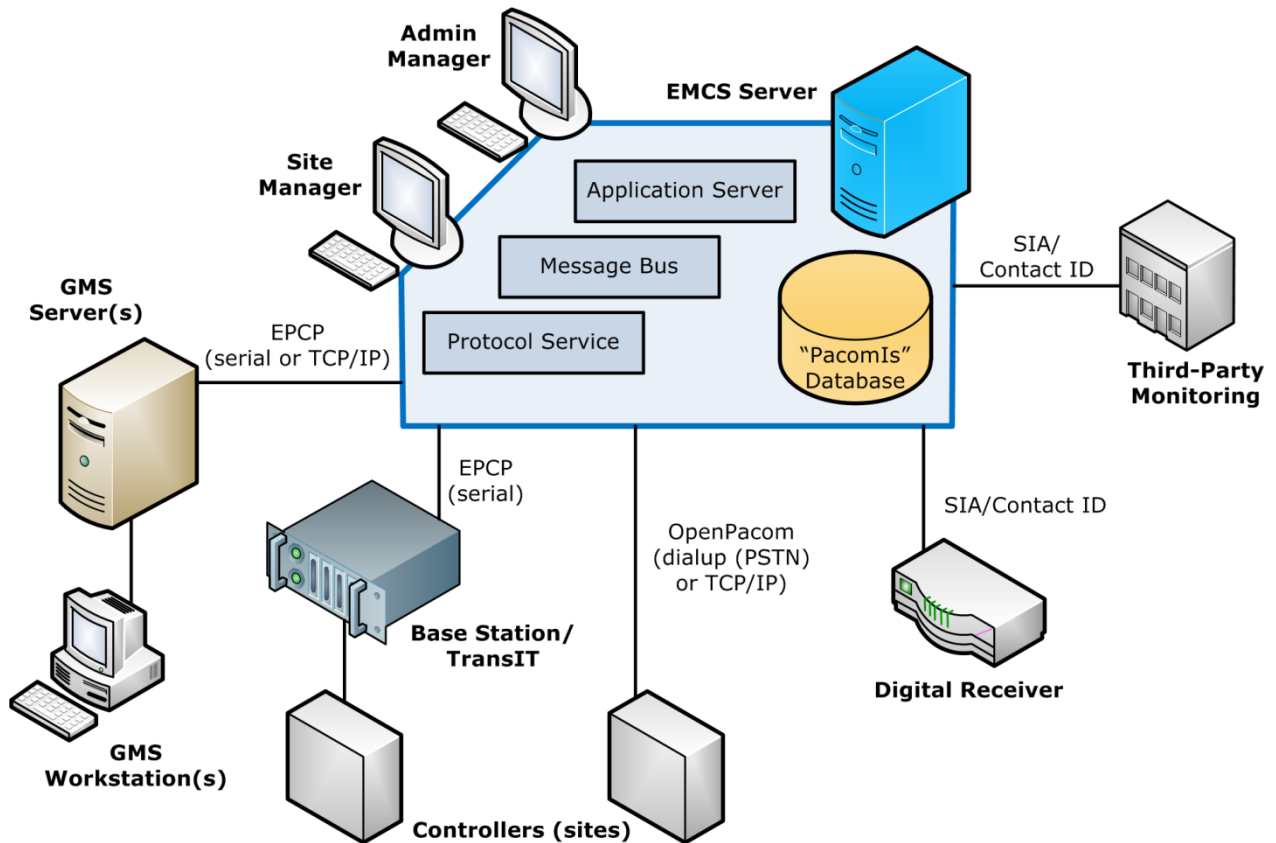

Site Manager provides a host of powerful configuration management features including selectable tree view exploring, bulk updates, configuration export, and basic or advanced configuration views to name just a few. Site Manager also provides the perfect instrument to easily manage firmware throughout your entire security system. With tools to download firmware to all controllers simultaneously or schedule firmware updates for a few selected controllers at a later date and time.

To ensure familiarity, ease of operation and efficiency, Site Manager employs the latest Microsoft Ribbon Bar based technology. By using this technology, Pacom has incorporated an intuitive User Interface that is both simple to use and easy to navigate. In addition, Site Manager introduces many productivity enhancing functions, such as the ability to logically group controllers making drill down a breeze, the ability to apply the same update to multiple controllers simultaneously and a general design philosophy to reduce the number of clicks required to perform and complete a task, what more could you ask for from a revolutionary security configuration tool.

Features

- Fully networked configuration tool
 - Centrally manage the configuration settings of all your sites from a single User Interface
 - View site status summary in real-time
 - Access to all site resources restricted by role and authority
 - Monitor events as they occur using a configurable transaction manager
 - Audit log to review operator activity
 - Offline configuration enables the ability to program a controller before it is installed
 - Send commands to any site with a few simple clicks
 - Group sites logically for easier understanding and quicker drill-down
 - Approve downloads and configuration changes before they are implemented
 - Manage firmware and schedule firmware downloads
 - Easy to use .NET Ribbon Bar based User Interface
 - Intelligent template management
 - Bulk update any controller parameter to any number of sites
-

Architecture

Hardware Requirements

Component	Requirement
Processor	Intel® Xeon 2.0Ghz or greater
Memory (RAM)	4GB recommended
Hard Disk Drive	320GB minimum
Graphics	16MB Graphics Memory @ 1280 x 1024 Resolution
Ports	1 x Ethernet Port (100Base-TX), 1 x USB Port

Software Requirements

Component	Requirement
Operating System	Windows 7

* The Site Manager application can only operate when connected to a Pacom .is server/database.

Ordering Information

Part Number	Type Code	Description
120 002 001	PIS-SMAN	Additional Pacom .is Site Manager client connection license
